

DataWarehouse Explorer

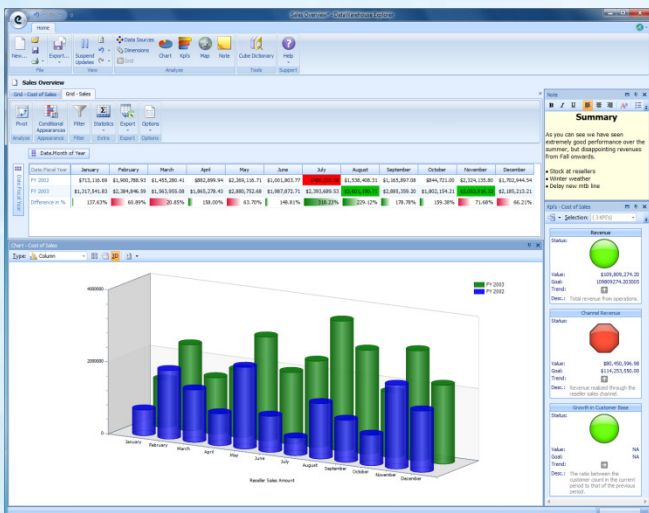

In today's increasingly competitive and volatile markets, the topics decision makers focus on change on a daily basis. And with that, the information needed to make timely decisions. Nowadays organizations don't have the time, nor the resources to employ specialized personnel to write reports for others. Decision makers on the other hand, do not have time to master complex reporting tools to fulfill personal reporting needs. Information Workers therefore have to resort to creating and maintaining spreadsheets, with all the headaches around corporate control and auditing as a result.

DataWarehouse Explorer (DWE) provides Information Workers with easy access to corporate, mandated data and allows them to select and visualize information for the task at hand. Over 300 companies worldwide already rely on DWE for agile and fact based decision making, including Rentenbank in Germany and TI Group Automotive.

Easy Analysis

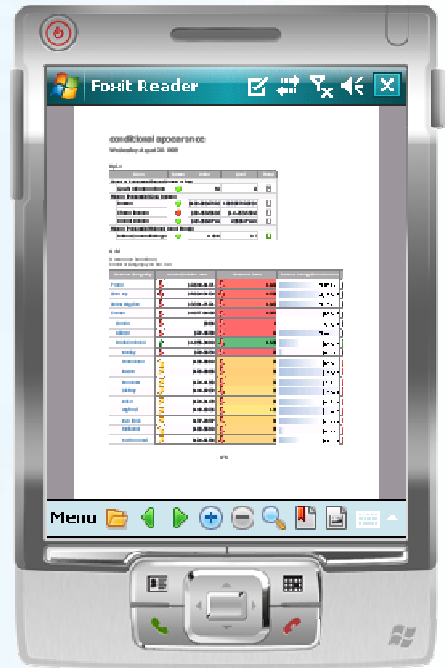

DataWarehouse Explorer is the easiest to use analysis tool based on a centralized, corporately managed data store. IT departments can make sure both data and business logic are correct, up-to-date, auditable and available throughout the organization. Information Workers can easily access, present and analyze information in a familiar Office interface which is optimized for non-technical users.

DataWarehouse Explorer allows BI specialists and other IT Professionals to concentrate on what they do best: making sure correct and timely information is available for decision makers. At the same time Information Workers are far more efficient in using their skills, insights and expertise to make solid business decisions.

Benefits

- Familiar, intuitive user interface**
 DataWarehouse Explorer has been designed to provide a familiar environment for Microsoft Office users. Familiar ribbons allow for the creation of reports using only point & click.
- Full analysis capabilities**
 DWE is an easy to use analysis application, still allowing Information Workers to carry out sophisticated analysis. Drill down, advanced selections, sorting and filtering are just a few examples, all just a mouse click away.
- Visualizations for deep understanding**
 Presenting and visualizing data are a material part of analysis. DWE provides all the visualizations needed to gain a thorough understanding of data. Mapping, charting, KPIs and exception reporting are just a few of the many possibilities.
- Export**
 After an analysis is completed, the conclusions have to be shared with co-workers. DWE provides export capabilities to all commonly used formats to make sharing of results easy. Also to co-workers who do not have a copy of DWE. The ability to add multiple notes to reports also proves invaluable for sharing purposes.
- Portal and SharePoint to publish**
 The DWE Portal provides the ability to publish reports to a web environment for easy distribution. Portal reports can be accessed from web browsers and from mobile devices. Also, reports can be scheduled to run and, if needed, emailed periodically to selected recipients. DWE Portal can be integrated into SharePoint.

Technology

DataWarehouse Explorer is based on the leading analysis technology platform, Microsoft SQL Server Analysis Services. SQL Server is by far the best platform to provide information workers full analysis capabilities, while IT makes sure the information is reliable, auditable, up-to-date and available with consistent performance. Choosing the most popular analysis platform allows our customers to reuse investments as data in SQL Server Analysis Services can be accessed by many more tools like Reporting Services and Crystal Reports.

About CNS International

CNS International, creator of DataWarehouse Explorer, delivers user-friendly, affordable and scalable analytic solutions, helping companies to improve business responsiveness through fast analysis of current and historical data. CNS International is a fast growing software company with over 300 companies and government agencies worldwide relying on our solutions. Strategic relationships with consulting, OEM and ISV organizations contribute to the success of CNS International in developing solutions and increasing customer satisfaction.
